# Effects of study duration on response rates and representativity in smartphone travel app of Statistics Netherlands

**Utrecht  
University**

# Introduction: the app

# App CBS Onderweg in Nederland

17:58

## Introductie

### Welkom bij het onderzoek Onderweg in Nederland

Deze app meet uw locaties en verplaatsingen. Het meten staat altijd aan op de achtergrond, ook als de app is afgesloten. Als u de app verwijdert stopt het onderzoek.

Zorg dat u een oplader bij de hand heeft. Door het gebruik van de app is uw batterij misschien sneller leeg dan u gewend bent.

**Research question: How many days should we ask respondents to participate in an app-based travel diary study?**

# Experiment: short (1 day) vs long (7 days) study duration of app study

Outcome variables:

- Participation rates
  - Registration
  - Activity
  - Completion
- Representativity of sample
- Data quality
- Evaluation survey

# Results

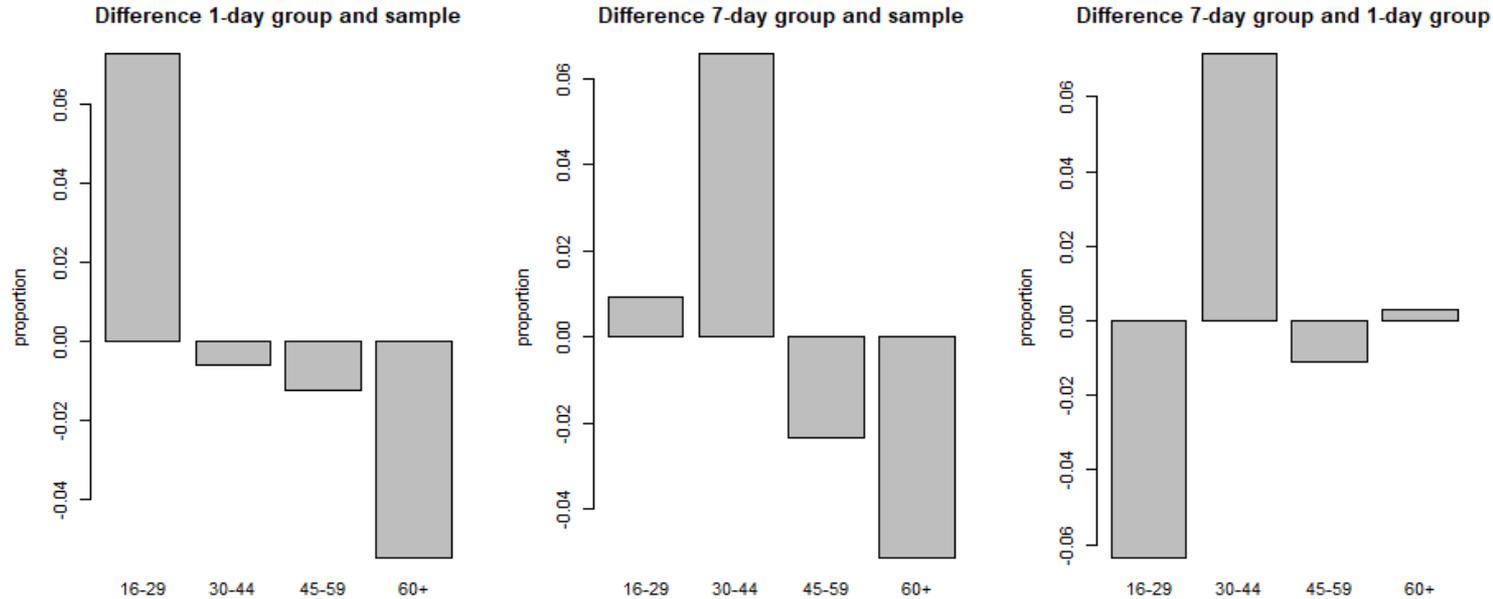

# Response rates 1 vs 7 days

Survey stage	1 day group, % survival	7-day group, % survival
Invitation letter	1158	1139
<b>Registration:</b> Registered in app	12% (N =133)	14% (N=160)
<b>Activity:</b> Logging ≥ 1 activity	11% (N=127)	13% (N=144)
Logging ≥ 12 hours on one day	8% (N=88)	9% (N=106)
<b>Completion:</b> Keeping app installed for study period 1-day group: ≥ 1 day 7-day group: ≥ 7 days	7% (N=84)	8% (N=87)

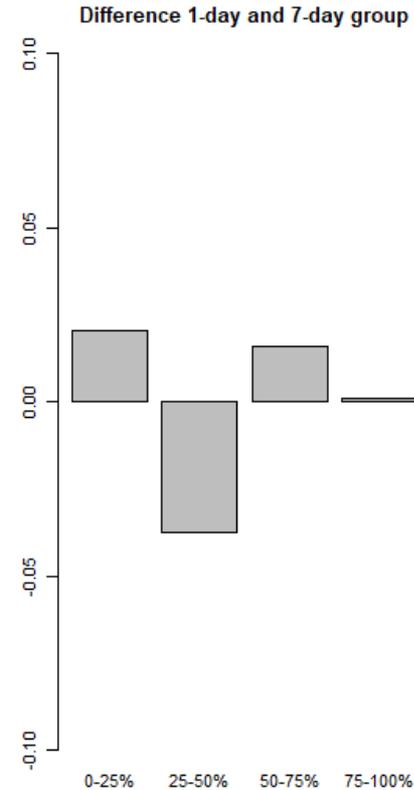

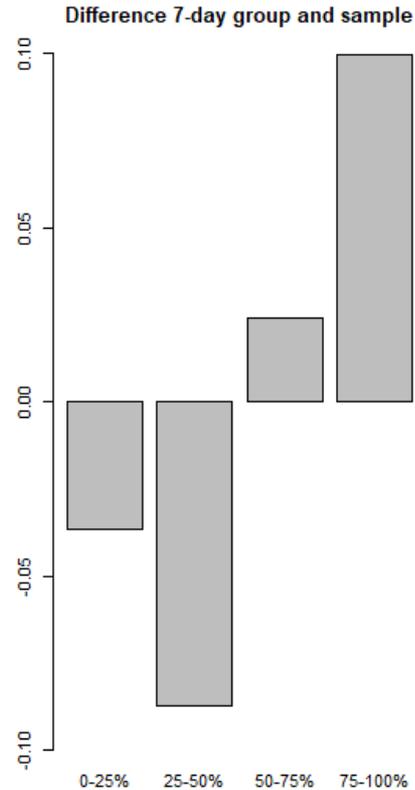

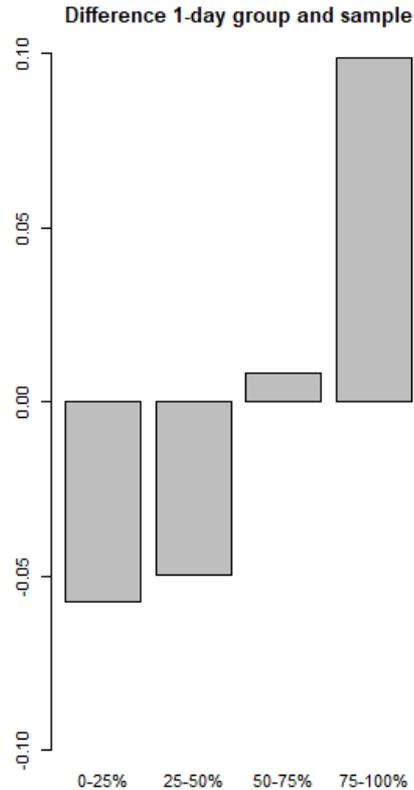

Conditional completion on registration =  
63% for 1-day group, 54% for 7-day group

# Representation 1 vs 7 compared to sample: Age

# Representation 1 vs 7 compared to sample:

# Data quality 1 vs 7 – comparison of first days

	1 <sup>st</sup> day of 1-day group	1 <sup>st</sup> day of 7-day group	mean day of 7-day group
Time spent in app per day	48 seconds	50 seconds	52 seconds
% trips labeled	71%	76%	80%
% stops labeled	75%	77%	80%

# Evaluation survey

No differences between 1-day and 7-day group regarding experienced time spent on study, and battery usage of the app

1-day group

- Rated the app more user friendly
- Experienced fewer technical issues

Other findings:

- 99% always had their phone on them
- Most respondents would use app again for similar travel survey

# Preliminary conclusion

1-day

- + lower burden for respondents
- + more user friendly
- specific starting date

7-day

- + higher initial response rates
- + higher activity rates
- + higher labeling rates

# Where to next? Future research paths

- Representativity:

- (How) do the 1-day and 7-day groups differ in representativity?
- Mode comparison between the app study and the web questionnaire

- Data quality:

- Compare if daily distance travelled differs between the 1-day and 7-day groups
